WO 1999-US2362	W	19990203

AB Methods to control, or manipulate, melanocyte and keratinocyte cell death are disclosed. In particular, a method of preventing epidermal melanocyte cell loss due to injury in a vertebrate is disclosed. Also disclosed is a method of inducing hair growth in a vertebrate, a method of inducing hair color in a vertebrate, a method of inducing skin color in a vertebrate, a method of treating baldness in an individual, and a method of treating alopecia areata in an individual. The present invention is based on the discovery that basal layer epidermal melanocytes and keratinocytes undergo characteristic programmed cell death in response to injury, such as UV-irradiation injury. In particular, epidermal melanocytes and keratinocytes undergo programmed cell death, or apoptosis, and the apoptosis in these cells is mediated by the p75 nerve growth factor receptor/ nerve growth factor pathway (p75 NGF-R/NGF), resulting in upregulation of Bcl-2 protein. Nerve growth factor rescued injured melanocytes undergoing apoptosis and enhanced survival of human keratinocytes after injury.

IT 197313-63-6

RL: BSU (Biological study, unclassified); PAC (Pharmacological activity); PRP (Properties); THU (Therapeutic use); BIOL (Biological study); USES (Uses)

(KGA-containing peptide; inhibition of apoptosis in keratinocytes and melanocytes by ligands of p75 nerve growth factor receptor)

AB Methods are provided for inhibiting  $\beta$ -amyloid-mediated activation of the p75 nerve growth factor receptor of a cell that expresses the p75 nerve growth factor receptor. Methods are also provided for inhibiting the binding of  $\beta$ -amyloid protein and  $\beta$ -amyloid peptides to the p75 nerve growth factor receptor, as are methods of inhibiting  $\beta$ -amyloid-mediated apoptosis of neural crest-derived cells. The methods involve contacting the cell with a substance containing e.g. the amino acid sequence lysine-glycine-lysine (KGK) or lysine-glycine-alanine (KGA), wherein the substance binds to the p75 nerve growth factor receptor, resulting in the inhibition of  $\beta$ -amyloid protein or  $\beta$ -amyloid peptide binding to and/or activation of the p75 nerve growth factor receptor, or wherein the substance inhibits  $\beta$ -amyloid protein- or  $\beta$ -amyloid peptide-mediated apoptosis of the cell which expresses the p75 nerve growth factor receptor.

AB Methods for evaluating the risk of an individual to develop  
Alzheimer's disease using cultured neural crest-derived melanocytes  
are described. Also described are methods of therapy for Alzheimer's  
disease using peptides that bind to the neurotrophin receptor (p75NTR)  
and competitively inhibit the binding of  $\beta$ -amyloid to the  
(p75NTR).
